SUMMARY

AI/ML Engineer shipping production **Generative AI** systems — from multi-agent orchestrators and **RAG** pipelines to LLM-powered workflow automation and edge-deployed neural networks. Built agentic research assistants scoring **0.90 groundedness** on RAGAS, automation platforms cutting manual triage by **~70%**, and on-chip sleep-prediction ensembles at **AUROC 0.87**. Fluent across the LangChain ecosystem, vector databases, workflow tools (n8n, Zapier, Make.com), and end-to-end MLOps. Seeking full-time AI Engineer, GenAI, or ML roles.

EDUCATION

IIIT Vadodara — **B.Tech, Computer Science & Engineering** (CPI: 6.33) Aug 2023 – May 2027
Hon. Sharad Pawar International School, Nashik — **CBSE** (XII: 80.00%, X: 84.80%) 2011 – 2022

TECHNICAL SKILLS

- **Generative & Agentic AI:** LangChain, LangGraph, LangSmith, LlamaIndex, DSPy, Model Context Protocol (MCP), Multi-Agent Systems, Retrieval-Augmented Generation (RAG), Prompt Engineering, Chain-of-Thought, Fine-tuning, Tool-Calling, Few-Shot Prompting, LLM Evaluation (RAGAS, custom evals), Guardrails
- **LLM APIs & Models:** OpenAI (GPT-4, GPT-OSS), Anthropic Claude, Google Gemini, Groq, Hugging Face, Ollama, Meta Llama
- **Workflow Automation:** n8n, Zapier, Make.com, Webhooks, Event-driven Pipelines, API Integrations
- **ML & Deep Learning:** scikit-learn, XGBoost, TensorFlow, LSTM, GRU, TCN, Transformer, SHAP, LIME, SMOTE, GridSearchCV, Feature Engineering, EDA, Model Evaluation
- **Backend & MLOps:** Python, FastAPI, Flask, REST APIs, Docker, Vercel, Streamlit, Git/GitHub, CI/CD, OpenAPI
- **Data & Databases:** ChromaDB, Pinecone (vector DBs), Embeddings, Semantic Search, PostgreSQL, MySQL, MongoDB, Supabase, SQL, pandas, NumPy, Matplotlib, Seaborn
- **Languages & Core CS:** Python, Java, C++, SQL, JavaScript, HTML/CSS; Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

EXPERIENCE

- Research Intern — **Edge AI & On-Chip Sleep-Quality Prediction** IIIT Vadodara · Jun 2026 – Aug 2026
- Built and benchmarked **7+ ML/DL models** (LSTM, GRU, TCN, Transformer, XGBoost) with a soft-voting ensemble to predict next-day WASO from 7-day wearable HRV and questionnaire biomarkers, reaching **AUROC ~0.87**.
 - Ensured leakage-free evaluation via subject-wise splits; applied **SHAP** and **LIME** explainability with Youden's-J threshold tuning (Python, TensorFlow, scikit-learn).
 - Researching on-chip **edge-hardware** implementation for real-time, low-power on-device inference from wearable biosignals.

PROJECTS

- Multi-Agent AI Research Assistant Python · LangGraph · LangChain · ChromaDB · RAGAS · Streamlit
- Architected an autonomous **multi-agent system** (Planner, Researcher, Writer, Critic) in LangGraph with tool-calling, shared vector memory, and iteration limits — decomposes queries, retrieves evidence, synthesizes cited structured reports.
 - Achieved **0.90 groundedness** on a 20-query RAGAS eval (~2× single-prompt baseline); Critic loops with Writer until every claim is source-backed; per-agent tracing via LangSmith.
- AI Workflow Automation Platform Python · n8n · LangChain · LLM APIs · Docker · Webhooks
- Designed and deployed end-to-end triage: emails and forms classified for intent and urgency by a **LangChain classifier**, then routed by n8n to Gmail, Sheets, or Slack with structured responses — cutting manual triage effort by **~70%**.
 - Hardened with retry-safe webhooks, idempotency, and failure alerts; few-shot prompt layer extracts clean JSON from unstructured text with run monitoring for success-rate tracking.
- Production ML Prediction Microservice Python · scikit-learn · XGBoost · SMOTE · FastAPI · Docker
- Delivered a customer-churn model as a REST microservice covering the full pipeline (EDA → features → training → deployment) on a **7,000+ record dataset**; improved F1 from **0.72 to 0.85** via SMOTE class balancing and XGBoost **GridSearchCV** tuning.
 - Deployed a containerized FastAPI service with input validation, structured logging, and **sub-100 ms** inference latency; OpenAPI-documented for downstream integration.

ACHIEVEMENTS & LEADERSHIP

- **Anveshan Hackathon, IIT Guwahati** — national-level 48-hour hackathon; built an ML-based Fake Job Scam Detection system. Also participated in **HackIIITV (2 editions)** and the **Adobe Hackathon**, delivering working prototypes in 24–36 hours.
- **Football:** 3rd place Inter-IIIT Sports Meet (national) representing IIIT Vadodara; 2nd at Concours DA-IICT; 2× runner-up at Ventura (2024, 2025); **3× state-level player** for Nashik Division, Maharashtra; qualified for SGFI National trials.
- **Teaching Assistant & Football Mentor** (paid), IIIT Vadodara (Aug 2025 – Present); **Event Photographer**, Obscura Photography Club (2023 – Present) — covered Kreiva, Ventura, HackIIITV.
